

EPA Commodity Issues
Jeffrey L. Dawson
Dawson.Jeff@EPA.Gov

A variety of issues related to ongoing scientific and regulatory activities related to methyl bromide fumigation of commodities and structures will be presented. This session will focus on what is being done to implement more effective means of managing potential worker risks related to these methyl bromide use patterns. This includes the development and evaluation of best management practices for these settings which will allow for more effective management of the risks associated with potentially impacted workers and those in surrounding communities. Brief presentations by EPA and other impacted stakeholders will be followed by an open discussion period.
