

Pinzon – Marco Pinzon discussed the Montreal Protocol targets for reduction, and how the Multilateral Fund assists countries to comply with that schedule. This fund supports 6,700 projects at a total cost of \$2.6 billion. The projects are categorized by type (Demonstration, Technical Assistance, Training, or Investment). Potential MeBr alternatives by crop type were also discussed. The presentation closed with significant developments, including the reduction of aggregate consumption for controlled uses in Article 5 to 25% (with a target of 100% by 2015), and future challenges.
